

InfoBluePrint Company Overview

InfoBluePrint is a company dedicated to helping businesses manage their critical business information as a valuable corporate asset. We are uniquely and exclusively focused on Data Management, and we provide specialised solutions and services in the areas of Data Quality, Master Data Management, Data Engineering & Migration and Data Governance.

What we do

DATA QUALITY

We help you manage Data Quality as an ongoing process, which benefits every business area. We ensure that your business information is reliable, complete, consistent, current and correctly interpreted.

DATA GOVERNANCE

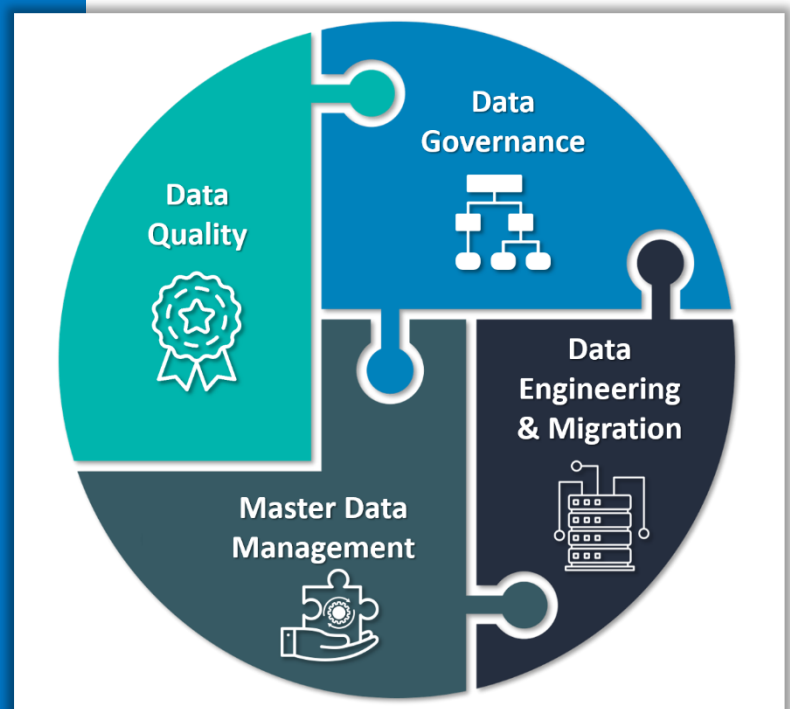

We ensure that all parts of your organisation are working in collaboration with each other, within clearly defined and assigned roles, responsibilities and processes. We help you to govern and manage data with the same rigour as other valuable assets such as finance and people.

DATA ENGINEERING & MIGRATION

We understand that as technology and requirements change, data engineering and migration become key, especially when re-configuring platforms. We improve and reconcile data to ensure it complies with all new requirements and achieves the expected business benefits.

MASTER DATA MANAGEMENT (MDM)

A Data Architecture that includes Master Data Management (MDM) hubs significantly improves an organisation's ability to sustain high quality data and can be a powerful enabler for achieving compliance and successful digital strategies.

How we do it

We have formulated structured methods and processes to enable maximum benefits to business in the shortest time possible, whilst responsibly meeting strategic business goals.

The InfoBlueprint Data Quality Management Framework guides our formal Solution Methodology for implementing effective DQ solutions. It ensures that both bottom-up **corrective** and top-down **preventive** approaches to Data Quality are followed so as to provide for sustained and successful data quality management.

Our solutions

We supply a range of solutions to help companies achieve business value through effective Data Management. Our solutions include:

Data Quality Improvement & Management

- Data Quality Assessments/Health Checks
- Design of customised Data Quality improvement solutions
